THE TRADITION OF

Lotte Lamps

Lotte Lamps were developed by the husband and wife team of Lotte and Gunnar Bostlund. Having received their training in 1940's Denmark, they took the newly developed Bauhaus design principles and applied them to develop a lighting product line including fine heavy-weight stoneware bases. Their son Morten used similar principles to adapt the modern engineering materials of fiberglass reinforced plastic to develop a unique, highly translucent lampshade.

Lotte Lamps NOW!

Lotte Lamps continue to be handcrafted in the same tradition, working from the original master molds, with the same glaze formulations. Newly adapted glazes and shapes keep the product line current.

Lotte Lamps

STONEWARE:

For your customers who demand the finest materials and craftsmanship. The higher firing temperatures of stoneware result in heavier lamps and highly durable glazes that won't chip. Hand finishing guarantees the beauty of the Chinese-inspired and contemporary glazes.

FIBERGLASS:

Highly translucent, highly diffusive fiberglass wound shades provide softer, more even light at power up to 250 watts. Seamless design allows total flexibility of lamp placement.

LINEN SHADES:

A new addition to Lotte Lamps: linen shades available in natural and black offering your customers design alternatives and a more economical option.

HARDWARE AND WIRING:

Heavy duty fittings and careful testing guarantee the reliability and safety of our lamps. 3-way switches and a generous 8 feet of wire allow flexibility for your home lighting environment. Stoneware lamps are UL listed.

SERVICE:

We stand behind every lamp we make. If you ever encounter a problem with your Lotte Lamp, we will be sure to make it right.
